

# Women's Health and the COVID Vaccine

It is safe for women and girls 5 and up to receive the COVID vaccine.

Revised January 2022

Women can receive the COVID vaccine...

At any time during pregnancy

If they are trying to get pregnant now or in the future

While breastfeeding

If they are using birth control

If you have questions, consult with your medical provider.

## Attention

If you are due for your mammogram, it is recommended that you get it before being vaccinated or waiting four to six weeks after getting your COVID-19 vaccine.

## Reminder:

it is important to continue your routine screenings for cholesterol, blood pressure, blood sugar, mammograms, PAP smears, and other screenings.
