COVID vaccine for children and adolescents

All children and adolescents 5-17 years of age should receive the COVID vaccine.

Did you know?
- Nearly 700 children have died from COVID.
- Children and adolescents can become sick with COVID and spread it to other people.
- Even if your child has been sick with COVID, the vaccine increases their protection against future infection.

Adolescents 12-17
- Vaccine available
- 2 doses, with 3 weeks between each dose

Kids 5-11
- Vaccine available
- 2 doses, with 3 weeks between each dose
